TOKYO:
Giant in motion
WORLD'S LARGEST CITY in the early 18th century (below), Edo contained 1.3 million people. With its castle now the Imperial Palace, the emperor's home, the old town is the hub of metropolitan Tokyo (right), with 12 million people shoehorned into 800 square miles. Toshima ku the most crowded ward, counts 57,200 per square mile.
The city's history is much more of the mind than the age. From hundreds of earthquakes and fires, typhoons and floods, Tokyoites have rebuilt, creating a numb no urban hodgepodge. Here and there green walls of oxidized copper testify to the prewar era in buildings that survived the catastrophic U.S. firebombing in 1945. It destroyed almost half the city and killed nearly 100,000. Today rebuilt, the city is laced together by an efficient subway system of ten lines totaling about 150 miles, as well as the 101 year-old Yamanote Line that loops central Tokyo.

THE WHITE HOUSE
WASHINGTON

14 December, 1917

My dear Mr. Grosvenor:

The Flag Number of the National Geographic Magazine is indeed most interesting and most valuable. I sincerely congratulate you on the thoroughness and intelligence with which the work has been done. It constitutes a very valuable document indeed.

Cordially and sincerely yours,

Woodrow Wilson

FOOD CYCLE
Passing from small species to large, toxics accumulate as they move up the food chain. In this simplified depiction PCBs move from plankton to tiny crustaceans, to small forage fish, to large predatory species like salmon and lake trout.

EVAPORATION
Of water lost from the lakes, 40 percent comes from surface evaporation. This, coupled with evaporation from the land and transpiration from plants, condenses and returns as precipitation. Periods of cold weather, as in the last two decades, decrease evapotranspiration from the land surface, reducing its capacity to absorb precipitation. Hence runoff increases, raising lake levels.

EROSION
Caused by storm-induced wave action and littoral currents, shore erosion has been accelerated by rising lake levels. Natural shoreline defenses, beaches dissipate the energy of waves to protect vulnerable bluffs and dunes. A rise of just one foot in water level can put several yards of sloping beach underwater

WIND-BORNE TOXICS
Fallout from fossil fuel emissions, waste incineration, and evaporation contribute volatile organic chemicals and heavy metals whose effects are only now being understood. Superior gets fourfifths of its toxics from the air Michigan one-half.
SEDIMENTS & DREDGING
Lake sediments harbor microorganisms that introduce poisons to the aquatic food chain. Channels and harbors in industrial regions may contain polychlorinated biphenyls (PCBs) far in excess of allowable levels. Channel dredging stirs the sediments, recontaminating the water
RUNOFF & LEACHING
After years of high precipitation the Great Lakes watershed is nearly saturated. Thus current rainfall runs off quickly, overballing currents high lake levels. Leaching of pesticides and industrial toxics through subsoil remains an important route of contamination for the lakes
MARINE INVADERS
The sea lamprey probably entered the lakes via the Erie and Welland Canals. Nearly wiping out many predatory fish species, this parasite set the stage for the proliferation of the alewife in the 1930s. By the late 1960s this species accounted for 85 percent of Lake Michigan s fish population
WIND SETUP
Sustained wind blowing along a lake's axis piles water against the windward shore. Lasting a few hours or days, storm surges, as they are often called, are influenced by wind force, duration and fetch, or distance the wind blows across the water
SEICHE
A lake's surface oscillates following a disturbance, usually atmospheric. In the Great Lakes such seiches often occur after storms. In Lake Michigan rises of as much as eight feet have swamped docks and marinas, causing destruction and casualties

Wisconsin and other Great Lakes states share concern over ecological problems afflicting these waters. PAINTING BY DAVIS MELTZER

Scientific Research and Exploration

By MELVIN M. PAYNE CHAIRMAN, COMMITTEE FOR RESEARCH AND EXPLORATION

IN ITS CENTENNIAL YEAR the National Geographic Society celebrated its substantial contribution to uncovering new knowledge through ever expanding investment in scientific research. When the Society's 10,500,000 members open their monthly NATIONAL GEOGRAPHIC magazines, they enjoy the principal benefit of membership. Many will note that certain articles—undersea discoveries, archaeological investigations, and natural history examinations, for example—carry a note saying "a research project supported in part by your Society." This is a reminder that members can take pride in the contribution that their dues make to supporting these as well as the many other Society research efforts not reported in the GEOGRAPHIC.

Since 1890 the Society has backed worldwide explorations and has supported basic research related to geography. Through its Committee for Research and Exploration, the Society has made close to 4,000 grants to assist the efforts of scholars and scientists around the world in increasing knowledge of our planet, its environment, and its inhabitants, from the tiniest mite to the most exalted achievements of humankind—and even of the cosmos beyond. In the past ten years funds allocated to research have exceeded the total amount spent in the prior 88 years. In 1988 alone 260 grants were made with a total budget of about six million dollars, a figure that exceeded the 1983 budget by nearly three million dollars.

Time and again this support has yielded important, even spectacular, finds. In Peru recent excavations at a site of the pre-Inca Moche people uncovered the richest cache of pre-Columbian artifacts ever scientifically excavated in the Americas. Principal investigator Walter Alva, with Christopher B. Donnan, brought to light some of the most finely crafted goldwork yet found in the New World—an archaeological discovery among the most astonishing in the modern era.

Across the world in Kenya, Alan Walker of Johns Hopkins University found jaws of an apelike creature that lived 17 million years ago—possibly a common ancestor of human beings and all the great apes. Team member Kamoya Kimeu came upon a remarkably complete 1.6-million-year-old skeleton of *Homo erectus*.

The results of many Society-backed research projects appear within the pages of NATIONAL GEOGRAPHIC RESEARCH, a scientific quarterly launched in 1985 that features Society-funded studies but

Forging a bond with an endangered species, Dian Fossey picks leaves that she chewed like a mountain gorilla to reassure an onlooker. For more than a decade this extraordinary woman was supported by the Society's Committee for Research and Exploration. Research grants also aid the search for the past. A thousand-year-old jar rises from a natural well at Dzibilchaltún, a Maya city explored by E. Wyllys Andrews IV of Tulane University.

Bold steps leading to nearly 4,000 grants began in 1890 with the Society's first expedition. Its members, standing atop an uncharted moraine (above), made a landmark survey of North America's highest range, the St. Elias Mountains on the Alaska-Canada border.

Society-supported research now plumbs the depths of the sea, where marine zoologist Eugenie Clark has studied deepwater sharks. Here, at 150 feet, she attempts to cut free a tangle of sixgill sharks and a gummy shark hooked on the same longline.

welcomes contributions from independent scholars and scientists. RESEARCH immediately took its place as an authoritative peer in the world of scientific publications. The highest quality drawings, charts, maps, and color photographs enliven each issue.*

In 1988, as part of its centennial celebration, the Society convened a symposium sponsored by the Committee for Research and Exploration at which 22 international experts recounted advances in science, technology, and exploration over the past century. Their primary emphasis, however, struck at concerns for the future—concerns that demand solutions if humanity is to maintain and improve its quality of life. The symposium focused on major issues that affect the future of air and water quality, land availability, forest conservation, environmental stability, and the protection of biological diversity.†

Here follow, under 42 category headings, summaries of the research projects. Even a casual glance at this body of work must impress the reader with the breadth and variety of findings made possible by member support of their Society's research objectives.

Medals and Awards of the Society

A freestanding crystal globe and pedestal by Steuben Glass along with $10,000 for the pursuit of additional research was awarded to each of 15 outstanding contributors to geography and other fields of scientific study and exploration on November 17, 1988. The National Geographic Society Centennial Awards were presented at a banquet in Washington, D.C. There Society staff members and guests ranged along the head table to talk with the honorees.

SISSE BRIMBERG (ABOVE); LIDA SUCHY

EXTENDING ITS LONG TRADITION of recognizing distinguished achievement in discovery and research, the National Geographic Society in November 1988 presented to 15 illustrious explorers, scholars, and scientists Centennial Awards for major contributions to knowledge of the earth, its inhabitants, and the encompassing natural environment. The honorees' names were added to the roster of eminent men and women who from 1906 have received from the Society medals and other awards for outstanding service to geography.

The recipients, each presented with a crystal globe, exemplify high and continuing achievement in a wide range of disciplines and epitomize the Society's century of commitment to and support of research and exploration. Each honoree also received $10,000 for research. The recipients:

Robert D. Ballard was a principal discoverer of *Titanic* and has explored deep-ocean geology and hydrothermal vents. George F. Bass has applied the painstaking methods of land archaeology to the seafloor, thereby uncovering artifacts of great beauty and cultural significance. Jacques-Yves Cousteau, who codesigned the Aqua-Lung and developed vessels for oceanic exploration, has investigated the world's seas and brought their wonders to millions.

Frank C. Craighead, Jr., and John J. Craighead pioneered radiotracking and satellite biotelemetry for the study of wildlife. Harold E. Edgerton invented the stroboscopic high-speed flash and developed side-scan sonar and underwater cameras.

Archaeologist Kenan T. Erim excavated a great Greco-Roman urban complex at Aphrodisias, Turkey. Senator John H. Glenn, Jr., first American to orbit the earth, opened a spectacular new vision of the "blue planet." The work of Jane Goodall with chimpanzees in Tanzania has helped humans gain a better understanding of their own place in nature.

Sir Edmund Hillary was first, with Sherpa Tenzing Norgay, to stand on the summit of Mount Everest. Mary D. Leakey and Richard E. Leakey have greatly advanced knowledge of the evolution of humans through their investigations of hominid remains in East Africa. For decades lecturer Thayer Soule has brought the world in all its diversity to Geographic audiences in Washington, D.C.

Barbara Washburn and Bradford Washburn have been leaders in aerial photography and mapping in the mountains of Alaska, the Himalaya, and the Grand Canyon.

HUBBARD MEDAL

The Hubbard Medal, named for Gardiner Greene Hubbard, first President of the Society, is awarded for distinction in exploration, discovery, and research.

JOHN W. YOUNG AND CAPT. ROBERT L. CRIPPEN, USN, 1981: For contributions to space science as crew of the space shuttle *Columbia*.

JAMES E. WEBB, 1978: Outstanding contribution to manned lunar landings.

BRUCE CHARLES HEEZEN AND MARIE THARP, 1978: Contributions to knowledge of the ocean floor.

ALEXANDER WETMORE, 1975: Contributions to ornithology.

NEIL A. ARMSTRONG, COL. EDWIN E. ALDRIN, JR., USAF, AND LT. COL. MICHAEL COLLINS, USAF, 1970: Space exploration; first moon landing as the crew of Apollo 11.

COL. FRANK BORMAN, USAF, CAPT. JAMES A. LOVELL, JR., USN, AND LT. COL. WILLIAM A. ANDERS, USAF, 1969: Space exploration; first to orbit the moon as crew of Apollo 8.

JUAN T. TRIPPE, 1967: Contributions to aviation.

AMERICAN MOUNT EVEREST EXPEDITION, 1963: Contributions to geography and high-altitude research through conquest of earth's highest mountain.

LT. COL. JOHN H. GLENN, JR., 1962: Space exploration.

LOUIS S. B. AND MARY D. LEAKEY, 1962: Anthropological discoveries in East Africa.

SIR VIVIAN FUCHS, 1959: Leadership of British trans-Antarctic expedition.

U.S. NAVY ANTARCTIC EXPEDITIONS, 1959: Antarctic research and exploration, 1955-59.

PAUL A. SIPLE, 1958: For 30 years of Antarctic explorations, including leadership of first group to winter at the South Pole.

BRITISH EVEREST EXPEDITION, 1954: First ascent of Mount Everest.

ROBERT S. OAKES, NGS

COMDR. DONALD B. MACMILLAN, 1953: Arctic explorations, 1908-52.

GEN. H. H. ARNOLD, 1945: Contributions to aviation.

LINCOLN ELLSWORTH, 1936: Extraordinary achievements in polar exploration.

CAPTS. ALBERT W. STEVENS AND ORVIL A. ANDERSON, 1935: World altitude record of 72,395 feet in balloon *Explorer II*.

ANNE MORROW LINDBERGH, 1934: Notable flights, as copilot, on Charles Lindbergh's aerial surveys.

ROY CHAPMAN ANDREWS, 1931: Geographic discoveries in Central Asia.

COL. CHARLES A. LINDBERGH, 1927: New York-Paris solo flight.

LT. COMDR. RICHARD E. BYRD, JR., 1926: First to reach North Pole by airplane. 1930, Special Medal of Honor: First to attain South Pole by air.

VILHJALMUR STEFANSSON, 1919: Discoveries in Canadian Arctic.

SIR ERNEST H. SHACKLETON, 1910: Antarctic explorations and farthest south, 88° 23′.

GROVE KARL GILBERT, 1909: Thirty years of achievements in physical geography.

CAPT. ROBERT A. BARTLETT, 1909: Far-north explorations with Peary's 1909 expedition.

CAPT. ROALD AMUNDSEN, 1907: Traverse of Northwest Passage. 1913, Special Gold Medal: Discovery of South Pole.

COMDR. ROBERT E. PEARY, 1906: Arctic explorations. 1909, Special Medal of Honor: Discovery of North Pole.

ALEXANDER GRAHAM BELL MEDAL

The Alexander Graham Bell Medal, named for the inventor and second Society President, is given for extraordinary achievement in geographic research, broadly construed.

BARBARA AND BRADFORD WASHBURN, 1980: For unique and notable contributions to geography and cartography.

GROSVENOR MEDAL

The Grosvenor Medal, named for Gilbert Hovey Grosvenor, Society President and Editor for 55 years, is awarded for exceptional service to geography by a Society officer or employee.

MELVIN MONROE PAYNE, 1982: For 50 years of dedicated service to the Society.

THOMAS WILLSON MCKNEW, 1980: For 48 years of dedicated service to the Society.

MELVILLE BELL GROSVENOR, 1974: Outstanding service to geography.

JOHN OLIVER LA GORCE, 1955: Outstanding service to the increase and diffusion of geographic knowledge, 1905-55.

GILBERT H. GROSVENOR, 1949: Outstanding service to geography as Editor of NATIONAL GEOGRAPHIC.

JOHN OLIVER LA GORCE MEDAL

The John Oliver La Gorce Medal, named for a former Society President and Editor, is presented for accomplishment in geographic exploration or in the sciences, or for public service to advance international understanding (formerly the Special Gold Medal).

ARTHUR H. ROBINSON, 1988: For outstanding achievements in cartography.

KAMOYA KIMEU, 1985: For contributions to the search for man's origins in Africa.

GEORGE F. BASS, 1979: For advancing the science of nautical archaeology.

Recipients of the 1988 National Geographic Centennial Awards join Society President and Chairman Gilbert M. Grosvenor. Standing from left: John H. Glenn, Jr., Robert D. Ballard, Kenan T. Erim, Bradford Washburn, Jane Goodall, Mr. Grosvenor, Richard E. Leakey, Thayer Soule, Sir Edmund Hillary; seated from left: George F. Bass, Harold E. Edgerton, Jacques-Yves Cousteau, Barbara Washburn, Mary D. Leakey, John J. Craighead, Frank C. Craighead, Jr. SISSE BRIMBERG

JOHN J. CRAIGHEAD AND FRANK C. CRAIGHEAD, JR.,1979: For pioneer use of biotelemetry to extend knowledge of wildlife behavior, life history, and ecology.

BEN L. ABRUZZO, MAXIE L. ANDERSON, AND LARRY NEWMAN, 1979: In recognition of the first manned transatlantic balloon flight.

PHILIP VAN HORN WEEMS, 1968: Contributions to marine, air, and space navigation.

HAROLD E. EDGERTON, 1968: Contributions to photographic and geophysical technology.

AMERICAN ANTARCTIC MOUNTAINEERING EXPEDITION, 1967: First ascent of Antarctica's highest peak, 1966-67.

CAPT. JACQUES-YVES COUSTEAU, 1961: Undersea exploration.

PRINCE PHILIP, DUKE OF EDINBURGH, 1957: Promoting science and better understanding among the world's peoples.

MRS. ROBERT E. PEARY, 1955: Contributions to husband's polar explorations.

THOMAS C. POULTER, 1937: Achievements, Byrd Antarctic expedition.

AMELIA EARHART, 1932: First solo Atlantic flight by a woman.

HUGO ECKENER, 1930: First global navigation by an airship.

FLOYD BENNETT, 1926: Flight to North Pole with Richard E. Byrd.

COL. GEORGE W. GOETHALS, 1914: Directing completion of Panama Canal.

AWARDS

CENTENNIAL AWARD, 1988

ROBERT D. BALLARD. Deep-sea explorer, marine geologist

GEORGE F. BASS. Undersea archaeologist

JACQUES-YVES COUSTEAU. Undersea explorer, inventor

FRANK C. CRAIGHEAD, JR. Bioecologist

JOHN J. CRAIGHEAD. Bioecologist

HAROLD E. EDGERTON. Electrical engineer

KENAN T. ERIM. Classical archaeologist

JOHN H. GLENN, JR. Senator, astronaut

JANE GOODALL. Zoologist

SIR EDMUND HILLARY. Mountaineer, diplomat

MARY D. LEAKEY. Archaeologist

RICHARD E. LEAKEY. Paleoanthropologist

THAYER SOULE. Lecturer

BRADFORD WASHBURN. Cartographer, photographer

BARBARA WASHBURN. Cartographer, mountaineer

JANE M. SMITH AWARD

Jane McGrew Smith directed that her bequest to the Society be used to establish an award in recognition of notable contributions to geography. The award was discontinued in 1977.
